

Spartan Flight Sponsorship Packet 2026

About Us

Picture from our introductory meeting in October 2025

Spartan Flight is San Jose State University's UAV engineering club, challenging students to design, build, and operate competitive autonomous drones, all with one goal in mind: competing at the 2026 SUAS Competition.

Since our founding in late 2025, we've united students across mechanical engineering, electrical engineering, computer science, and business to build the X650, a drone engineered from the ground up to meet the demands of competitive autonomous flight.

Our teams are tackling real engineering challenges: fabricating a custom airframe, designing a safe and precise payload delivery system, building a custom battery management system and battery pack, and solving complex computer vision and path optimization problems required for fully autonomous operation.

Our Values

- **Innovation:** We push for the best performance through iterative design and data analysis
- **Teamwork:** We combine the skills and backgrounds of different students to accomplish more, faster
- **Education:** We provide students with a way to put theory learned in a classroom into action in the field

About the Competition

The Student Unmanned Aerial Systems (SUAS) Competition, hosted by AUVSI, is a national competition hosted in Maryland that challenges university teams to design, build, and fly autonomous aircraft capable of completing complex missions. Teams are scored on their system design, mission performance, and autonomous capabilities such as object detection and navigation. The competition simulates real-world UAV applications like search and rescue and aerial mapping. It provides students with hands-on experience in aerospace engineering, robotics, and teamwork under real operational constraints.

Why Sponsor Spartan Flight?

Building a custom-engineered drone has been no small feat. It demands specialized components, precision tooling, and materials that carry real costs that, as a student-run organization, we cannot cover alone. **We rely on the generosity of sponsors and community partners to make projects like this possible.**

Your support makes a direct impact in two ways: **it funds the development of our X650 drone, and it reduces the financial burden on our own members for travel, allowing us to focus on building and competing rather than fundraising.**

By partnering with Spartan Flight, your brand becomes part of the story of one of San José State University's most ambitious engineering teams. **We see sponsorships as more than just visibility, we treat them as genuine collaborations. Whether that means co-branding opportunities, technical input, or joint outreach, we're always open to partnerships that create real value for your organization.**

We welcome both monetary contributions and materials donations, with materials valued at fair market price toward sponsorship tiers.

Our estimated budget for SUAS 2026 and the remainder of the year:

- Lodging: \$1,000
- Airfare: \$1,750
- Travel expenses (food, shipping, and incidentals): \$1,000
- Drone components (cash or parts donations are always welcome)

As Spartan Flight operates under SJSU's Tower Foundation, all donations are fully tax deductible.

SPARTAN FLIGHT

Meet the Leads

BEN NGUYEN - ELECTRICAL LEAD

Ben Nguyen is a junior at SJSU studying Electrical Engineering and serves as both founding club president and electrical team lead. With hands-on experience at Stoke Space, Amazon, and more, Ben's technical focus spans vehicle systems, power electronics, and electromagnetics.

ANDY VAN - SOFTWARE LEAD

Andy Van is a junior at SJSU studying Computer Science and leads the software team in developing autonomous systems and neural network solutions for our drone. He brings industry experience from STMicroelectronics and other organizations to drive our software initiatives forward.

JUSTIN WANG - MECHANICAL LEAD

Justin Wang is a junior at SJSU studying Mechanical Engineering and serves as Spartan Flight's mechanical lead. He brings a strong interest in computer-aided design, UAS systems, and additive manufacturing. He leads a small team designing the airframe and components of our drone.

ETHAN ONYETT - BUSINESS LEAD

Ethan Onyett is a senior at SJSU studying Business Analytics and leads Spartan Flight's business operations. Drawing on experience in analytics, sales, and marketing from T-Mobile and various startups, Ethan's passion lies in predictive analytics, machine learning, and business intelligence systems.

SPARTAN FLIGHT

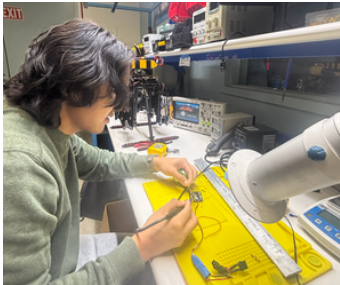

Projects

We are split into three technical subteams: mechanical, electrical, and software. We additionally have a business team to support these operations. This year, we are building a drone that can fly for 30+ minutes, perform high-quality photogrammetry, and deliver a payload to search and rescue targets.

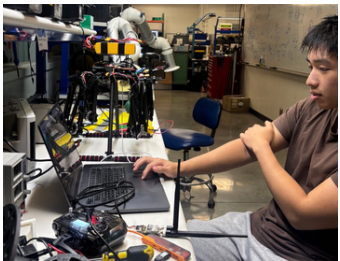

MECHANICAL

- Custom airframe
- Battery power pack
- Payload release mechanism
- Innovated parachute design
- Weight reduction

ELECTRICAL

- Li-ion power pack fabrication
- Battery management system
- Telemetry and communications
- Low-voltage power regulation
- FPGA computer vision acceleration

SOFTWARE

- OpenCV photogrammetry
- Target detection with AI
- Nvidia Jetson optimizations
- Autonomy software
- Simulation software

BUSINESS

- Sponsor relationships and outreach
- Dynamic analytics dashboards
- Predictive budget analysis
- Operations planning

SPARTAN FLIGHT

Our Roadmap

October 30, 2025 - First General Meeting

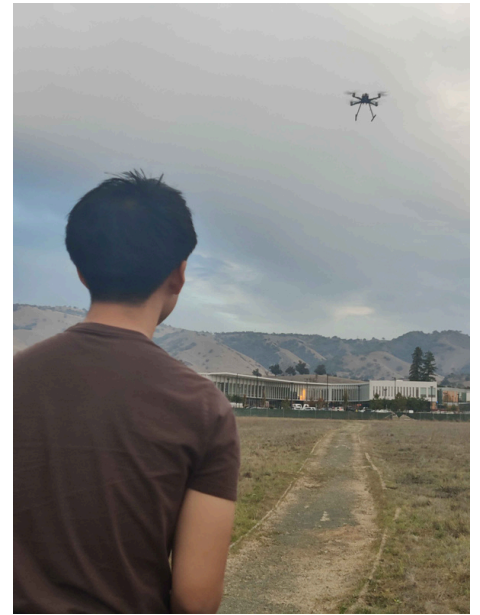

December 2025 - Initial Design Complete

January 2026 - First Autonomous Flight

March 2026 - First Major Revision Round

April 3, 2026 - Register for Competition

May 2026 - Final Optimizations,
Design Documentation

First autonomous flight in January 2026

September 13 - 19, 2026 - SUAS Competition

October 2026 - Post Competition
Reflections & Celebrations

Building the drone in December 2025

Our team working on our X650

How to Donate

For corporate sponsorships, part donations, and brand collaborations: reach out to Ethan or Ben at spartanflightsjsu@gmail.com and we will coordinate with you.

For individual monetary donations: SJSU's Give Now platform allows you to give donations directly to us. Search 'SJSU Give Now' (or click [HERE](#)) and search 'Spartan Flight' to donate.

For all other requests, feel free to reach out to us on LinkedIn (/spartan-flight) or Instagram (@spartan.flight).

Thank you to our Founding Sponsors!
